

Reverse Osmosis Connector

ROCONN

is a reverse osmosis loop that puts all of the primary connections at the most convenient location. This will allow you to service your reverse osmosis system faster and easier than ever before possible.

ROCONN Model No. RO-2 Shown Above (includes all connectors - tubing not included)

This model will accommodate all residential reverse osmosis systems plumbed 3/8" tank to faucet.

ROCONN makes disinfecting the storage tank a simple operation.

ROCONN is very easy to install and will make your installations look great.

ROCONN will allow you to bypass your icemaker while permitting you to dispense water.

ROCONN fittings can be reused repeatedly, collet and o-rings are readily replaceable.

ROCONN was developed by a water service technician with over 15 years experience in the service of reverse osmosis systems.

ROCONN comes with tubing plugs for removing the RO system and self drilling screws for mounting.

ROCONN is made from the best materials available. Show your customers you care, make ROCONN available to them. They will thank you for it in years to come.

US PATENT # 5,660,720

All fittings and valves are NSF approved.
